Original T-A drill inserts are an excellent choice for gerneral purpose use. The design provides fast penetration rates that produce good hole size and finish. Standard geometry combines highly efficient and stable cutting action to minimize power consumption. Recommended for use in most steels, cast irons, high temperature alloys and aluminum alloys.
Gen2 T-A is the next generation in replaceable tip drilling systems. Gen2 T-A provides for lower drilling forces with increased drill stability. The geometry allows for smoother breakout on through holes and improved chip formation.
Flat Bottom T-A drills are used as a secondary finishing tool for bottoming and for flat bottom finishing.
MATERIALS:
HSS (CPM-M4) This tool steel grade possesses the highest material toughness to resist shock. It will drill the majority of steels and cast irons in the industry that are below 280 BHN.
Super Cobalt (CPM-T15) This tool steel grade exhibits mid-range wear resistance and toughness. This grade with provide increased wear resistance in any ferrous or non-ferrous application within the 280-359 BHN range.
Premium Cobalt the most wear-resistant tool steel. It is more susceptible to fracture from shock and vibration. It is recommended for hard materials (350-500 BHN) as well as abrasive materials.
COATINGS:
TiN coating provides increased lubricity and heat resistance and allows for increased machining speeds.
TiAlN coating has a higher heat threshold allowing for higher drilling speeds in stainless steels, titanium and nickel-based alloys. Has proven successful in cast iron applications. Not for aluminum.
AM200 proprietary coating has excellent wear characteristics and a high heat threshold. Ideal for most high penetration drilling applications.

- **C5** carbide is for general use in steel applications. It offers exceptionally high wear resistance. High machine tool rigidity is required.
- **C1** carbide is primarily for steel applications. This carbide offers wear characteristics similar to C5 carbide. In addition to its wear characteristics C1 carbide is considerably more durable when compared to other carbide grades.
- **C2** is for use in non-ferrous applications (high temperature alloys, stainless steels, aluminums, cast irons). It offers exceptionally high wear resistance. High machine tool rigidity is required.

Allied T-A® Drill Insert Flanged Shank Holders

Coolant Fed

- Available with a larger body diameter than the standard series, which yields added support for drill inserts and higher inertial strength. This reduces holder failure in high torque applications. Call for pricing.
- T-A® Drill Insert holders are also available in XL and 3XL lengths including metric versions of most sizes. Call for pricing.
- When using the extended, long, XL and 3XL holders without a support bushing, AMEC recommends using a short T-A® holder to establish an initial hole two to three times diameters deep
- Never start or continue rotation of this tool holder without proper engagement with a work piece or fixture. Failure to do so could result in tool failure and/or personal injury.
- Rotary coolant adapters (for taper shank holders) are sold separately.

Severance CNC-K™ Precision 6 Flute Countersinks — High Speed Steel

- Designed specifically for use in NC, CNC and preset machine tools
- Feature Chatterless™ tooth geometry, using staggered cutting angles to eliminate the cause of harmonic vibration
- Close tolerances on cutting angles, diameters and lengths assure setting accuracy and excellent performance
- May be resharpened many times for ultimate economy

Technical and Programming Information

NOTE: For any depth the countersink diameter expands in a direct ratio. As you travel in the (A) direction along the axis of the countersink (X) expands in a direct relationship to angle (K) (forming an angle with the tangent of X/A)

Since the angle expands on both sides of the frilled hole: you must use 2 times the tangent of the angle for your ratio (R).

Price (K)	Ratio (R) = 2X/A
32°	1.15
41°	1.74
45°	2.00
50°	2.38
55°	2.86
60°	3.46

Angle (K) Tangent = X/A

Calculations
C = H + RA
A = (C - H)/R
S = (C - D)/R

Example:

.500 hole diameter, countersink to .875 cut diameter with 41° angle (use NCK-1"-41°)

A = .875 - .500 / 1.74 = .216

S = .875 - .203 / 1.74 = .386

PROCUT Taper Pin Reamers

High Speed Steel

- For reaming tapered holes that receive standard taper pins
- Reamers have a taper of 1/4" per foot
- The point of each reamer will enter hole reamed by next smaller size
- **Straight flute** is designed for hand use in easier to ream materials
- **Spiral flute** with left hand spiral for hand use in harder to ream materials
- **Helical flute** built for machine reaming of pin holes on a production basis, prevents chips from packing in flutes and reduces breakage; free cutting action at high speeds produces a fine finish

Carbide Tipped Expansion Chucking Reamers

Straight Shank or Taper Shank

- Recommended for reaming abrasive materials
- As the diameter wears down, the reamers can be expanded many times by tightening the end adjusting screw and regrinding to its original size

NOTE: Expansion reamers should not be expanded to use at diameters larger than listed diameters nor be considered as adjustable for use in producing holes of several sizes and the expansion screw should never be loosened

HSS MORSE M GP Cleanout Taps

Fractional, Machine Screw & Metric • High Speed Steel • Plug Chamfer

- Cleanout taps are used exclusively to restore existing internal threads by removing dirt, old finishes, burrs, and debris
- Cleanout taps are used by hand, hand held driver, drill press, or machine to restore threaded holes. When used by machine, a holder with axial float should be used, allowing the tap to time itself to existing threads.
- Pitch diameter tolerance is H0 for all machine screw and fractional threads and D0 for all metric threads

General Purpose Spiral Fluted Taps

High Speed Steel • Bright Finish

- Recommended for tapping relatively deep blind holes in materials which produce long curling chips
- The higher flute helix angle increases the lifting action in ejecting chips through the open end of the hole and affords increased ability to span slots or other interruptions
- OSG List #107 (inch) List #143 (metric)

HSS MORSE M PM M-42 8% Cobalt Coarse & Fine Tooth Roughing End Mills

Roughing end mills feature a chip breaker type cutting edge for heavier cuts, high speeds and feeds and greatly increased productivity

Coarse Tooth Center Cutting 30° Helix:

- Recommended for a wide variety of materials of soft and medium hardness including titantion and aluminum alloys

TiN Coating:

- TiN coating allows increased feeds over uncoated end mills
- Improves chip flow, resists galling and edge build up and reduces heat generated in the metal removal process
- Ideal for a wide range of applications where improved tool life and elevated feeds and speeds are required

Fine Tooth Center Cutting 30° Helix:

- Recommended for difficult to machine, high tensile strength, abrasive and harder materials up to 40 Rc

TiCN Coating:

- TiCN coating has the same lubricity as TiN but is more than 30% harder. This makes it the optimum choice for maximizing tool life in production runs
- Ideal for operating at aggressive feeds and speeds and for cutting extremely abrasive and difficult-to-cut materials

SOLID MORSE MASTER Solid Carbide 4 Flute Single End Mills

30° Helix • Center Cutting

- These 4-flute end mills with a greater core thickness offer increased tool strength and reduced tool deflection
- 4-Flute mills also reduce chip load per tooth for the milling of tougher materials, greater wear resistance and improved surface finish
- Center cutting end allows for plunge cutting into solid material
- **Tolerances:**
  Sizes to 1/4" +.000 - .002"

Carbide Tipped Side Milling Cutters

For non-ferrous material:

- Use for production milling of aluminum, magnesium, zinc, brass, bronze, plastics and non-metals
- Very large flute capacity assures good chip flow and permits high feed rates.

For cast iron:

- Use for heavy production milling of cast iron and malleable iron
- Large flute capacity but more teeth permits high metal removal at moderate speeds and feeds

- **For steel and tougher, harder alloys:**
- Steel cutting grade of carbide permits the heavy chip loads recommended for milling steel

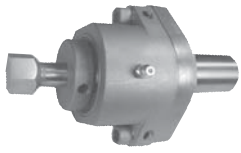
Rotary Broach Holders



Accepts Internal Hex Rotary/ Punch Broaches

Applications: For use on any type of CNC or manual turning, milling, drilling or screw machine.

Features:

- The holder has an internal live spindle, which holds the end cutting broach tool
- The centerline of the cutting tool is offset at 1° from the centerline of the workpiece
- This offset causes the broach to wobble creating a shearing effect as the broach is advanced into the workpiece or vice versa.
